

Thomas D. Smith

CAD Automation & Systems Integration Consultant | CAD Guardian

Atlanta, GA | Remote / hybrid / onsite consulting | (470) 862-4855 | thomas@tsmithcode.ai | cadguardian.com

CAD automation and systems integration consultant helping engineering leaders, CAD managers, document-control owners, operations leaders, and consulting buyers turn repeated CAD work into trusted workflows, validation gates, and reviewable output. Strong fit when a buyer needs a scoped assessment, prototype, utility, or handoff-ready automation slice without exposing protected project material.

BUYER ROLES

- Engineering leaders
- CAD managers
- Document-control owners
- Operations leaders
- Procurement and consulting buyers
- Platform and workflow owners

CAD SYSTEMS

MicroStation AutoCAD
Inventor SolidWorks
Revit/BIM Vault/PDM/PLM
iLogic AutoLISP .NET
SQL Power BI Validation

BEST-FIT WORK

CAD automation
Drawing packages
Document control
Manufacturing
Infrastructure
Engineering operations

CAD GUARDIAN STRENGTHS

CAD automation assessment

Map the workflow, platform, output package, failure mode, and first safe decision before automation scope expands.

Drawing and package automation

Turn repeated PDFs, DXFs, naming rules, revisions, exports, BOM context, and review states into repeatable output paths.

Platform workflow integration

Connect MicroStation, AutoCAD, Inventor, SolidWorks, Revit/BIM, Vault, PDM, PLM, and adjacent data systems around the actual handoff.

Buyer-safe proof

Use public-safe examples, validation checks, exception lists, and protected-artifact boundaries so buyers can review fit without leaking sensitive files.

RELEVANT DELIVERY CONTEXT

IBM (Contract)

2024 - 2025

Software Architect / Platform Modernization

- Owned modernization slices for specialized internal-platform applications, including service structure, maintainability, and delivery quality.
- Improved development workflow with source control discipline, release notes, build verification, and clearer technical handoff.
- Helped connect platform behavior, operating constraints, and stakeholder expectations into scoped implementation decisions.

Habasit America

2022 - 2024

CAD Drafter

- Built workflow automation, request tracking, data extraction, and reporting tools for manufacturing and operations teams.
- Reduced manual coordination by turning repeated business activity into clearer intake, status, and management views.
- Partnered with operators, managers, and technical stakeholders to move improvements from spreadsheet habits into supportable systems.

1Path Systems

2021 - 2022

Senior Software Architect

- Led architecture and delivery for internal software, integration, and business application improvements.
- Balanced hands-on engineering with planning, estimation, stakeholder communication, and ownership of technical outcomes.

Thomas D. Smith

CAD automation, platform workflows, validation gates, and buyer-safe delivery

Atlanta, GA | Remote / hybrid / onsite consulting | (470) 862-4855 | thomas@tsmithcode.ai | cadguardian.com

BUYER SIGNALS

- CAD workflow friction tied to a buyer decision
- Platform-specific awareness without overclaiming protected project detail
- Validation gates before automation expands
- Document-control and output-package discipline
- Consulting-only contact and procurement-safe framing

CONSULTING PATH

- Start with CAD platform, workflow in view, output type, failure mode, business impact, and timeline.
- Do not send private drawings, title blocks, source files, credentials, client names, internal paths, or protected artifacts in first contact.

BUYER HANDOFF

- Workflow map and input/output assumptions
- Validation checklist and exception notes
- Pilot, prototype, utility, or stop recommendation
- Support, rollback, and owner handoff considerations

EARLIER OPERATING CONTEXT

Daikin Applied

2019 - 2021

Senior IT Applications Developer

- Delivered business application improvements across .NET, data, reporting, and enterprise workflow needs.
- Supported operating teams with maintainable software changes, troubleshooting, and cross-functional technical communication.

Fry Reglet

2017 - 2019

Operations Technology Specialist

- Created operational tools, reporting improvements, and workflow support for manufacturing and executive visibility.
- Turned process knowledge into repeatable systems that improved quote, tracking, and management routines.

BUYER-SAFE PROOF

- Built workflow automation, request tracking, data extraction, and reporting tools for manufacturing and operations teams.
- Improved repeatable intake, status, and management visibility around engineering and production work.

- Translated ambiguous CAD-adjacent process friction into scoped technical decisions, validation gates, and supportable handoff.
- Shaped public proof kits and buyer-safe service paths for AutoCAD, Inventor, SolidWorks, MicroStation, Revit/BIM, and PDM/PLM workflows.

CAD AUTOMATION DELIVERY PATTERN

Name the workflow

Capture the platform, output, file assumptions, owner, reviewer, failure mode, and business decision before proposing a tool.

Prove one slice

Start with one drawing package, data cleanup, validation report, or workflow screen that a buyer can inspect and accept.

Protect the artifacts

Keep private drawings, source files, title blocks, credentials, client names, and internal paths out of public material and first contact.

Leave a handoff path

Document inputs, outputs, skipped cases, review gates, rollback expectations, and next-scope options so the team can own the result.

CAD Guardian resume content is intentionally buyer-safe. Private drawings, title blocks, source files, credentials, client names, internal paths, and protected project artifacts should move only through the right review channel after fit is established.
